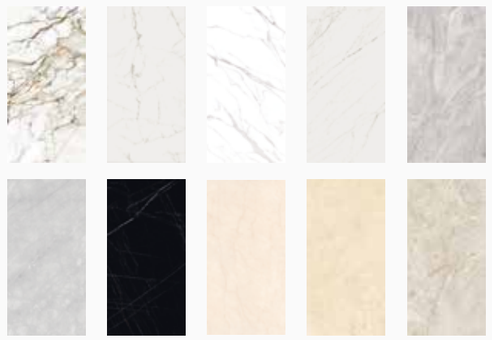
Tech Matt

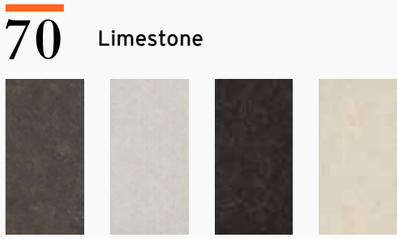
Tech Matt is a high performance surface, first introduced in ISPIRA marble designs. This surface is highly ambitious in terms of size and aspirations, without sacrificing the quality and durability of the material, which guarantees beauty and impeccable performance over a period of time.



50 Matt Surfaces

58 Cast Concrete

70 Limestone



80 Cherry Wood

84

Fusion

A beautiful amalgamation of Cast Concrete & Cherry Wood Collection for architectural solutions.

ISPIRA
STEP INTO STYLE

our brand

Ispira is a brand of Nexion Surfaces, a multinational ceramic company that is the result of a partnership between two large family groups that have always been leaders in their reference markets: Ceramiche Speranza, the best in its class Italian firm founded in 1961, that has setup the state of the art manufacturing facilities in India together with the Aghara family, one of the leading players in ceramics and sanitary ware in India since 1977.

Ispira was born to propose an innovative and original synthesis between aesthetic sensibility and technical functionality of ceramic surfaces, bringing its customers closer to a new idea of style that enhances the ambitions of their projects.

Step into style

A new idea of style to raise the aesthetic dimension of design solutions.

| Porcelain stoneware (International standard)
| Vitrified stoneware (Indian standard)
| 9 mm thickness
| Rectified

Reflect your vibrant lifestyle

Innovative proposals that capture and return light with evocative optical effects.

ISPIRA
STEP INTO STYLE

MATT

Feel the nature of style

Fascinating solutions that return the beauty of the inspirational materials in their natural essentiality.

4 **Design**
Concrete, Stone, Wood and Fusion, to find the most suitable natural accent for every location.

38 **Inspirations**
12 looks inspired by the expressive power of concrete, 11 looks inspired by the natural character of the stones, 9 looks inspired by the warmth of natural wood and 6 looks inspired by a beautiful amalgamation of cast concrete & cherry wood.

5 **Sizes**
To propose a wide variety of installation solutions.

Packaging & shipping

Packaging & delivery

Packaging is a fundamental element of customer service, being aimed at allowing maximum use of space/weight available and to minimize the risk of breakages, even on bumpy roads.

Ispira's packaging standards are based on carefully designed box and pallet packaging for the optimal load of trucks and containers.

That is very important when large tiles format are to be delivered and Ispira Logistics Department has devised a number of packaging system depending on product sizes and means of transport, including Euro-size pallets and metal A-frames.

Though shipping usually takes place under the customer's responsibility, Ispira is fully committed to help clients manage this activity in the best possible way.

Ispira's Customer Service Department works with clients and logistic companies to arrange for shipments and to guarantee that loading and unloading procedures are properly carried out, in particular at destination.

Slabs 120x240 cm

A-Frame

Standard size tiles (other sizes)

Standard europallet

Domestic Packing Details

Nominal Size cm	Thickness mm	Pcs. x box	Sq. mtr x box	Sq. Ft x box	Weight x box (kg)

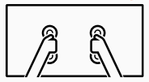
* refers to A Frames, # refers to 40 ft. Container
Tiles are packaged in a random manner and company cannot guarantee the type of faces inside each package.

Installation guidelines

1. Handling

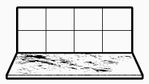


- To prevent breakage, we recommended to keep all Large Format Tiles in their original packaging during handling.
- Tiles measuring 60x120 cm or less can be handled by hand.
- To handle Large Format Tiles, we recommend to use lifting tools with a sufficient load capacity.
- The use of forklift is recommended; however, it has to be equipped with following fork details:
    - minimum length of 1.2 m if the crates are handled resting on the long side
    - minimum length of 2.1 m if the crates are handled resting on the short side
- It is recommended that you handle the A Frame individually.

2. Cutting

- When cutting Large Format Tiles, we recommend to use professional dry cutters. Using other tools may lead to uneven cuts or breakage of the material.
  It is recommended to check the cutter blade before any cut. A damaged blade increases the risk of damaging.

3. Background



- Prepare a screed with a perfectly flat, dry, compact, dust-free surface, with no cracks or other visible damage.
  The ideal height difference should be no more than 3 mm, measured using a 2 m spirit level
- In case of slightly cracked or non-solid screed, it is recommended to use as crack preventing mat between substrate & slab. Screed should have suitable hardness and mechanical resistance to stresses due to the final uses. It should be prepared using perimeter bands & all structural expansion joints as necessary.
  Moisture of the screed must be ≤ 4%.
- It should be according to BS 8204-1-2003 or DIN 18560 standards.

4. Laying with adhesives

- We recommend laying with this technique, which should be carried out by suitably qualified workers with appropriate equipment.
- While choosing the adhesive, we recommend you to bear in mind the following: type of Large Format Tiles (group to which they belong and size), type of surface to be tiled and intended use of room.
- It is recommended to have dry laying before final laying. Direction of tiles can be checked through punches (on the back of tiles).
- Adhesive should be applied on the floor as well as on backside of tiles with 3-4 mm thickness.
- To make corrections, we recommend you to check the material before the adhesive dries
- Adhesive will vary depend on the surface so follow manufacturer recommendation. Cementitious Adhesive (C2 Category - C2TES1) is recommended.
- Apply the adhesive onto the back of the slab with a 3mm trowel and should be well distributed on corners & edges.
- It must be spread over in one direction only. Ideally it should be spread towards shortest direction of the tile.
- Spread the adhesive for one tile (pc) onto the floor substrate using a 15mm U-notch or a 10mm V-notch trowel and following the same direction as previously applied to the back of the slab. Adhesive should have 100% contact with tiles/substrate to avoid hollow sounding.
- It is recommended to start from the centre of the slabs and then move towards the edges.
- Tap the slab with a rubber mallet for a complete fixing ensuring the air is expelled.
- It is recommended to handle slabs with appropriate equipment.

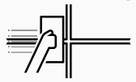
5. Joints

- Deciding where to position the joints is also a part of the work which should be entrusted to qualified workers.
- The joints must be positioned:
    - on structural connections (structural joints)
    - between the wall and the floor (perimeter joints)
    - between one tile and another (laying joints or gaps)
    - between tiles and other materials
      (e.g. pairings between ceramic, linoleum, or wood).
- A 2 mm joint spacer is suggested for all sizes.
- For Large Format Tiles, a 2 mm joint is strongly recommended, as well as proper positioning of spacers on floor sides.
- With help of 2 mm spacer & thanks to a 0.8 caliber (meaning that a 120x240 cm minimal size actually measures 119.8x239.8 cm), different sized tiles can be used within a single floor pattern, while still achieving perfect laying.

6. Use of tile leveling system during the installation

- For optimum surface performances, it is strongly recommended to use a tile leveling system.
- This solution also acts as a spacer for joints, thus contributing to make the installation more accurate.

7. Grouting



- We recommend you to use grout with the same color as the product.
- We recommend you to wait for the adhesive to dry completely before grouting the joints.
- We also advise you to ensure there is no adhesive or dust in the joints.
- Apply the grout using rubber trowel.
- Both cement & epoxy grout can be used. It is not recommended to use grouting with colored pigments in contrast with color of tiles.
- We recommend you to grout no more than 4-5 square metres of tiling at a time. This applies in particular when laying textured, non-slip and polished tiles.
- You are advised to remove all excess grout from the tile surface while the grout is still wet, working in diagonal movements. This applies in particular to tiles laid in outdoor areas.
- Use a damp sponge and perfectly clean water to thoroughly clean the entire tiled surface and the joints.
- We then recommend that you dry the surface with a damp cloth.
- Considering how quickly epoxy grouts set, if these are used, we recommend you to clean the excess grout off immediately with a sponge and plenty of water.
- On the day after grouting, you should give the laid tiles a second cleaning with alkaline detergents.

8. Cleaning after laying

- Thorough initial cleaning is essential to ensure the tiles a long-lasting appearance over time.
  It should not be carried out until at least 4 to 5 days after laying and grouting but no later than 10 days afterwards.
- For washing, we advise you to use an acid-based product, diluted according to the instructions provided by the manufacturer. However, we advise against the use of products containing hydrofluoric acid or derivatives thereof.
- It is a good idea to use a piece of unlaid tile, or a hidden part of the laid tiles, to check the resistance of the ceramic surface to the acid. This applies in particular when laying honed or polished tiles.
- When you start washing, it is worthwhile soaking the tiled surface first of all, focusing in particular on the joints. The acid solution must be left to work for no more than two minutes and must never be left to dry.
- To remove the acid solution, one of the following methods should be used: single-brush machine equipped with a non-abrasive disc, a wet vacuum, or washing by hand. After removing the solution, we recommend you rinse the tiled surface thoroughly.
- In the event that machines are used, we suggest that you finish off the job by hand in the harder to reach spots, such as the corners of the walls.

9. Ordinary cleaning and care of surfaces

- For ordinary cleaning, simply wash with warm water and cloths and/or soft sponges. If necessary, neutral detergents can also be used. If you have non-neutral detergents, remember to test their effects on a piece of an unlaid tile or on a hidden part of the tiled surface.
- Abrasive cleaners should not be used on glossy and/or polished tiles; this kind of detergent can be used on tiles with matt surfaces though; In the event, you should still test the effects on a piece of an unlaid tile or on a hidden part of the tiled surface.
- We also advise against the use of soaps, waxes, or rinse aids.
- To remove traces of grease or oil on the surfaces, we suggest you use detergents with organic or alkaline solvents (pH> 9), rinsing properly at the end.
- In large areas, appropriate industrial washer-dryers can be used, taking care to finish off drying by hand where necessary.
- Abrasive tools (such as metal pads or rigid brushes) should not be used on tiled surfaces.
- After Installation of the floor, it should be properly covered with suitable material in order to prevent tiles from damage or scratches because of on-site processing. It is also important not to drag heavy objects across the surface to avoid scratches.

ISPIRA Quality Standards
